Australian Occupational Health and Safety Thesaurus Guidelines

Introduction

The Australian Occupational Health and Safety Thesaurus (AOHST) is a list of subject or descriptor terms covering concepts relevant to occupational health and safety (OHS) in Australia. It was developed by the National Occupational Health & Safety Commission (NOHSC) for use by any Australian organisation or individual with an interest in OHS.

Background

The AOHST is of particular importance in the online environment in providing subject access to documents, databases and web sites. The development of this thesaurus was an outcome of the decision to apply metadata standards to NOHSC information available on the Internet. The use of thesaurus terms, and the application of metadata to information in the online environment, will provide added value to searching capability and ensure that searchers are able to locate all relevant information.

Purpose and Scope

The purpose of the thesaurus is to provide a standard list of terms to be used in describing what a document or other type of information source is about. These selected terms are called *preferred terms*.

AOHST also includes synonyms that were not selected as preferred terms, but have been included as references to make it easier to find the preferred terms. These references are called *non-preferred terms*.

Example

Overuse injuries has been selected as the *preferred term* to describe injuries caused by repetition and overuse. AOHST also includes the *non-preferred terms*, **Occupational overuse syndrome**, **Repetitive strain injuries**, **OOS** and **RSI**.

These non-preferred terms refer the searcher to the preferred term **Overuse injuries**.

By using (preferring) one term instead of five to represent this concept, it ensures that all relevant information is retrieved using the search term: **Overuse injuries**.

The thesaurus also includes a number of notes (Scope Notes) which help explain the meaning and usage of a particular term.

Example

Textile industry

Use for manufacturing of textiles and textile products

The scope of AOHST is to cover concepts relevant to OHS in Australia at national, State and local level. Some concepts are international, but the emphasis is given to the Australian context wherever necessary.

The aim is to limit the size of the thesaurus to no more than 3,000 terms. This is to ensure that it is relatively easy to review and keep up-to-date.

The terminology currently included in AOHST is OHS specific. This means that certain areas which are peripheral to the NOHSC's priorities, such as compensation and insurance, are less developed at this stage. However, the thesaurus is structured in such a way as to allow the inclusion or exclusion of other categories, as required.

The following areas of OHS in Australia are included:

Accidents and emergencies
Education and training
Hazards
Health and safety management
Occupational medicine
Toxicology
Workplace and industrial organisation

Choice of preferred terms

Where possible, the aim is towards single concept terms in the thesaurus.

For example:

Poisoning
Certification
Fatalities
Dangerous goods
Hand-arm vibration
Duty of care
Apprentices
Confined spaces
Work at height

The purpose of this is to keep the AOHST as simple and as short as possible, as well as to make indexing and searching more flexible. However, where appropriate, multiple concept terms are included.

When selecting a subject term for a particular situation, it may be necessary to select a group of thesaurus terms to cover all aspects of the subject concept.

For example:

Training material on safety in the construction industry may have the following thesaurus terms selected:

Training materials
Construction industry
Construction safety

This will ensure that searchers can find the material either by keying in any of the individual terms, or by combining some or all of the individual terms.

The following criteria were taken into account when choosing particular terms in preference to other similar terms (synonyms):

- Australian spelling and terminology are preferred.

For example,

Whitegoods industry
Graziers
Aluminium

Where possible, plain language and natural language order are used, although sometimes this has been balanced by preferring terminology used by experts in the field.

Examples of plain English and natural language:

AIDS (Disease) *instead of* Acquired immunodeficiency syndrome

Back injuries *instead of* Spinal injuries

Hearing loss *instead of* Industrial deafness

Preventive measures *instead of* Measures, Preventive

Examples of expert language:

Isocyanates

ELF radiation

The AOHST is mainly based on usage, which means that terms generally are not included until needed. For example, not every industry is represented by a thesaurus term. They may be added as required.

Where possible each concept is represented by a specific term. Occasionally rarely used specific concepts were not given a separate thesaurus term. Instead, a more general term was chosen, with an appropriate reference or scope note.

For example:

Fresh meat, fish and poultry retailing is used to cover retailing of all fresh meat.

This decision may be changed should the specific term be required more frequently in the future.

References

The following sources were used to assist in the development of AOHST terms:

- *Australian and New Zealand Standard Industrial Classification (ANZSIC) 1993*
- Worksafe Western Australia. Information Division: *OHS Thesaurus*, February 1999
- *CIS THESAURUS*. Occupational Safety and Health. International Occupational Safety and Health Information Centre. International Labour Office, Geneva 1976
- *CCH Occupational Health & Safety. GLOSSARY*. CCH International. The Information Professionals
- *Occupational Toxicology*. Neill H. Stacey (ed.), London 1993

ANSZIC terminology

The terminology used in ANSZIC has been followed closely, although some exceptions have been made.

For example:

1. **Construction industry; Tunnel construction** have been chosen instead of the ANZSIC terms, as they follow the underlying principle of using plain language and common usage terms wherever possible.
2. **Spraying and Dusting** is used instead of **Aerial agricultural services**. The latter term was considered to be a little-used term so the more commonly used term was chosen.

The following types of terms were excluded from the thesaurus:

- Personal names
- Names of individual organisations (corporate body names)

Geographic names have been limited to a small number of jurisdictional names, which include the names of Australian States and Territories and the names of jurisdictions which are likely to be used regularly in the OHS context.

For example:

New Zealand
Europe
United States
Canada

Thesaurus Structure

The structure of the AOHST is hierarchical. All terms are grouped together into main categories and, within each category, terms may be divided further, from broader terms to more specific terms. For example, **Accidents and emergencies**, which is a major category, is divided into a number of sub-categories, which in turn may be further subdivided into narrower categories:

Accidents and emergencies
Industrial accidents
Transport accidents
Road accidents

The purpose of the hierarchical structure is to provide the indexer with a structured approach to managing the application of subject terms. The grouping together of terms and arranging them from broad to specific, where appropriate, allows related terms to be linked to each other in a network of broader, narrower and related term references.

Example

Transport accidents
BT Industrial accidents
NT Road accidents

Use of the reference structure can aid the indexer in selecting appropriate terms, as well as assist the online searcher with access to the thesaurus to obtain information on related topics.

Main Categories

Currently, AOHST is divided into 13 main categories:

- Accidents and emergencies**
- Education and training**
- Formats**
- Hazards**
- Health and safety management**
- Jurisdictions**
- Legal requirements**
- Methodologies**
- Occupational medicine**
- Political, social and economic issues**
- Toxicology**
- Workers' compensation and injury management**
- Workplace and industrial organisation**

The Formats category contains terms for types of materials such as **Videos, Checklists, Forms**, which have relevance across many areas of OHS. A term may be selected from this category to accompany another term which indicates the specific subject.

For example:

Videos dealing with the hazard of drug abuse in the workplace
may have the following terms:

Drug abuse Videos

The thesaurus is divided into 2 parts: alphabetical and hierarchical. It may be consulted through its hierarchical structure or alphabetically.

The hierarchy gives an overview of the scope of the thesaurus and the relationship of terms to each other. By grouping terms, the hierarchy makes it easier to find concepts belonging in the same category.

For example, the terms for different types of hazardous metals are all listed together under **Hazardous substances → Metals**

Hazardous substances
Metals
Aluminium
Antimony
Arsenic

The hierarchical structure can also help in dealing with certain technical and scientific terms.

For example, the term **Solvents** groups together the individual solvent names:

Solvents
Alcohols
Ethanol
Isopropanol

The alphabetical list provides a quick detailed look at each individual term, including all notes and references involving the term.

Updating and continuing growth

The AOHST should be kept up-to-date and relevant by reviewing existing terms and adding new ones, as required. To ensure this is done consistently, please send all suggestions and comments to:

Changes from the Second to the Third editions

Revisions incorporated in July 2002 and circulated in the third draft:

Accidents and Emergencies

.Industrial Accidents

..Falls (transferred from non-preferred term for slips, trips, falls

...Falls from heights (new term)

...Slip, trips, falls (moved down a level so sub to falls.

Hazards

...Minerals

...Asbestos

...Blue asbestos

...Brown asbestos (new term, with non-preferred term: amosite

...White asbestos

.Psychological and physiological hazards

..Fatigue (moved from OCC medicine_injuries and diseases with its sub-headings)

...Driver fatigue

...Mental fatigue

.Work environment hazards (new term)

..Cold workplaces (all these subheadings are relocated from Workplace and Industrial organisation-Working conditions)

..Confined spaces

..Hot workplaces

..Tunnels

..Work at heights

...Roofs

...Air contaminants

...Environmental tobacco smoke (changed from Tobacco smoke, non-preferred terms : tobacco smoke, ETS and passive smoking)

...Passive smoking (moved to non-preferred term for Environmental tobacco smoke)

Health and safety management

.Buildings and amenities (new term)

..Access and Egress (all these subheadings are relocated from Workplace and Industrial organisation-Working conditions)

..Accommodation (and all its subheadings)

..Amenities

..Thermal environment

...Air conditioning

...Heating

.Ergonomics

..Design factors (add non-preferred term safe design)

Jurisdictions

.Australia

..Commonwealth of Australia (new term)

Legal requirements

.Enforcement (new term)

.Common law (moved up a level so same level as Legislation, not sub heading to legislation.)

Methodologies

.Analysis

..Lost time (deleted)

.Performance indicators

..Positive performance indicators (new term, non-preferred term is PPI)

.Statistics

..Accident statistics

...Lost time injuries (new term, non-preferred term LTI)

Occupational Medicine

.Diseases and injuries

..Liver diseases (add related term hepatitis)

..Musculoskeletal injuries (non-preferred terms added : musculoskeletal disease, MSD)

Political, social and economic issues

.Organisation of work (and all its sub-headings moved from **Workplace and industrial organisation**)

..Workplace change (moved from **Workplace and industrial organisation**)

Workplace and industrial organisation (change heading to **Workplaces, industries and occupations**)

- .Organisation of work (and all its sub-headings moved to Political, social and economic issues)
 - ..Workplace change moved to (Political, social and economic issues)
 - ..Telecommuting (add new non-preferred term telework)

 - .Work places (changed from Work environments
 - ..Call centres (new term, new non-preferred term telecentres)
-

Further suggestions: incorporated into current release, 3rd ed. of March 2003:

Education, information and training

- .Training courses
- .. Registered training organisations (new term, non-preferred RTO)

- .Recognition of current competencies (new term, non-preferred RCC)

Hazards

- .Work environment hazards
- ..Trenches (Add term)

Health and safety management

- .Ergonomics
- ..Design factors
(add non-preferred term safe design principles)

- .Occupational hygiene
- ..Assessment and measurement
- ...Hazard identification
(add non-preferred terms: HACCP; HAZOP; Fault tree analysis; Management Oversight and Risk Tree (MORT);
- ...Risk assessment
(add non-preferred term: risk analysis)
- ..Control and preventative measures
(add non-preferred term: critical control point)

- .Safety Management
- ..Safety audits (add non-preferred term: OHS audit)
- ...Workplace inspections (Add non-preferred term: Job Safety Analysis; JSA)

- ..Safety systems (add non-preferred term: OHS Management Systems, OHSMS)
- ..Safety Culture (add non-preferred term: Behaviour based safety; BBS)

Workers' compensation and injury management

- .Rehabilitation
- ..Return to work plans
- ...(add term: injury management)
- ...(add term: pain management)

Workplaces, industries and occupations

- .Industries and activities
- ..Sport and fitness (new term)

- .Occupational groups
- ..Ergonomists (new term)

- .Work places
- ..Fitness centres (new term)

Hierarchical Structure of Preferred Terms

Hierarchical Structure

Accidents and emergencies

- . Commuting accidents
- . Disasters
- . Evacuations
- . Explosions
 - .. Dust explosions
 - .. Gas explosions
- . Fires
 - .. Bushfires
- . Industrial accidents
 - .. Agricultural accidents
 - .. Chemical spills
 - .. Drowning
 - .. Electrical accidents
 - ... Electric shocks
 - ... Electrocution
 - .. Falling objects
 - .. Falls
 - ... Falls from heights
 - ... Slips, trips, falls
 - .. Major hazardous incidents
 - .. Poisoning
 - .. Radiation accidents
 - .. Transport accidents
 - ... Air transport accidents
 - ... Rail accidents
 - ... Road accidents
 - ... Transport of dangerous goods accidents
 - ... Water transport accidents

Education, information and training

- . Certification
- . Competency training
- . Curriculum materials
- . Distance learning
- . Guidelines
- . Induction training
- . Information dissemination
 - .. Conferences and meetings
 - .. Teleconferencing
 - .. Video conferencing
- . Intellectual level
 - .. Expert level
 - .. Lay person level
 - .. School level
- . Plain English

Hierarchical Structure

- . Primary schools
- . Professional education
- . Public awareness
- . Recognition of current competencies
- . Retraining
- . Secondary schools
- . Training assessment
- . Training courses
 - .. Accredited training courses
 - .. Registered training organisations
- . Training materials
- . Training organisation and structure
 - .. Off-the-job training
 - .. On-the-job training
- . Training policies
- . Vocational education and training

Formats

- . Audiocassettes
- . CD ROMS
- . Checklists
- . Databases
- . Expert systems
- . Forms
- . Logbooks
- . Manuals
- . Procedures
- . Programs
- . Software
- . Solutions
- . Tables
- . Videos
- . Websites

Hazards

- . Biological hazards
 - .. Fungi
 - .. Microbiological hazards
 - ... Microorganisms
 - Bacteria
 - Parasites
 - Protozoa
 - Viruses
 - .. Sharps
- . Chemical hazards
 - .. Dangerous goods
 - ... Corrosives

Hierarchical Structure

- Hydrogen fluoride
- ... Explosives
- ... Flammable substances
 - Flammable liquids
 - Flammable solids
- ... Gases
 - Carbon dioxide
 - Compressed gases
 - Ammonia
 - Carbon monoxide
 - Chlorine
 - Hydrogen cyanide
 - Liquefied petroleum gas
 - Phosgene
 - Sulphur dioxide
 - Ethylene oxide
 - Hydrogen sulphide
 - Ozone
 - Phosphine
- ... Oxidisers
 - Organic peroxides
- ... Radioactive materials
- .. Hazardous substances
 - ... Acids and alkalis
 - Acetic acid
 - Formic acid
 - Hydrochloric acid
 - Hydrofluoric acid
 - Lactic acid
 - Oxalic acid
 - Phosphoric acid
 - Sulphuric acid
 - ... Agricultural chemicals
 - Fertilisers
 - Pesticides
 - Bipyridyl compounds
 - Diquat
 - Paraquat
 - Carbamates
 - Organochlorines
 - Organophosphates
 - Pyrethroids
 - ... Air contaminants
 - Aerosols
 - Bioaerosols
 - Dusts and fibres
 - Inorganic dusts

Hierarchical Structure

- Asbestos dust
- Coal dust
- Silica dust
- Synthetic mineral fibres
 - Fibre glass
- Organic dusts
 - Grain dust
 - Wood dust
- Emissions
 - Diesel engine exhaust
 - Fumes
 - Welding fumes
 - Environmental tobacco smoke
- ... Carcinogens
 - 4,4-Methylenebis (2-chloroaniline)
- ... Cyanides
- ... Cytotoxic drugs
- ... Formaldehyde
- ... Glutaraldehyde
- ... Isocyanates
- ... Metals
 - Aluminium
 - Antimony
 - Arsenic
 - Beryllium
 - Cadmium
 - Chromium
 - Cobalt
 - Lead
 - Lithium
 - Manganese
 - Mercury
 - Nickel
 - Platinum
 - Quartz
 - Selenium
 - Thallium
 - Tin
 - Uranium
 - Vanadium
 - Zinc
- ... Minerals
 - Asbestos
 - Blue asbestos
 - Brown asbestos
 - White asbestos
 - Bauxite

Hierarchical Structure

- Clays
- Coal
- Graphite
- Limestone
- Sandstone
- Silica
- Slate
- Talc
- ... Mixtures and products
 - Asbestos cement
 - Asbestos sheeting
 - Cement
 - Concrete
 - Coal by-products
 - Coal tar
 - Creosote
 - Detergents
 - Disinfectants
 - Glues
 - Paints
 - Petroleum products
 - Asphalt
 - Diesel oil
 - Timber preservatives
- ... Mutagens
- ... PCBs
- ... Plastics and polymers
 - Polystyrene
 - Styrene
 - Vinyl chloride
- ... Refrigerants
- ... Solvents
 - Alcohols
 - Ethanol
 - Isopropanol
 - Esters
 - Ethers
 - Glycol ethers
 - Glycols
 - Hydrocarbons
 - Benzene
 - Methane
 - Toluene
 - Ketones
- ... Teratogens
