

Agriculture: Minimising the risk of exposure to COVID-19

The model Work Health and Safety (WHS) laws require employers* to take care of the health safety and welfare of their workers and others at the workplace. This includes:

- > providing and maintaining a work environment that is without risk to health and safety
- > making sure farm activities don't expose anyone to health and safety risks. That includes your family, other workers, farm visitors and contractors
- > providing adequate and accessible facilities for the welfare of workers in carrying out their work, and
- > monitoring the health of workers and the conditions of the workplace for the purpose of preventing illness or injury

As an employer, you must identify risks at the workplace, and where possible eliminate or minimise those risks.

Famers and agricultural workers are at risk of exposure to COVID-19

Agricultural workers often work, eat, and sometimes live, in close proximity to each other. This increases the risk of exposure to COVID-19. You must do everything reasonably practicable to keep these workers a safe physical distance apart of at least 1.5 metres.

You must implement control measures to minimise the spread of COVID-19 and ensure that other measures to address well known work health and safety risks continue to be implemented. This is the case even if implementing control measures result in delays to your production.

Managing the risks of exposure to COVID-19

Physical distancing

[Physical distancing](#) – keeping everyone at the workplace at least 1.5 metres physically apart – will be challenging in some agricultural workplaces and for some agricultural activities, but it is a key measure to minimise the spread of COVID-19.

- > Limit physical interactions between workers.
 - > Postpone non-essential gatherings or training.
 - > Review tasks and processes that usually require close interaction and identify ways to modify these to increase physical distancing between workers where practical and safe to do so.
 - > For essential gatherings, conduct in spaces that enable workers to keep the required physical distance of at least 1.5 metres, ideally outdoor spaces.
 - > Split workers' shifts.
 - > Use methods such as mobile phone or radio to communicate.
 - > Reducing the number of workers utilising common areas at a given time (e.g. by staggering meal breaks and start times).
 - > Spread out furniture in common areas.
- > Limit worker numbers.
 - > Reduce the number of tasks to be completed each day.
 - > Postpone non-essential work.
- > Place [signage](#) about physical distancing around the workplace.
- > Consider if livestock sale yards and wool auctions can be held online or remotely.

Put processes in place to regularly monitor and review the implementation of [physical distancing](#) measures to ensure they remain effective.

If [physical distancing](#) measures introduce new health and safety risks (e.g. because they impact communication), you need to manage those risks too.

The Safe Work Australia website has links to a range of [posters and resources](#) to help remind workers and others of the risks of COVID-19 and the measures that are necessary to stop its spread.. These posters can be placed in client-facing work environments (e.g. workplace entrances, including farm gates).

Health checks and quarantine

You must monitor the health of your workers for key symptoms of COVID-19, such as fever.

- > Direct all workers (whether they are at the workplace or not) to report to you if:
 - > they are experiencing any symptoms
 - > they have been, or have potentially been, exposed to a person who has been diagnosed with COVID-19 or is suspected to have COVID-19 (even if the person who is suspected to have COVID-19 has not yet been tested), or
 - > they have undertaken, or are planning to undertake, any travel.

- > Stop workers working if they are displaying symptoms.
- > Stop workers who have contracted COVID-19 from returning to the workplace until they provide evidence they are clear of the virus.
- > For those who provide accommodation for workers:
 - > Check the temperature of your workers regularly.
 - > Designate areas for quarantine and medical treatment of workers displaying symptoms. Consider evacuating such workers from the site altogether.
 - > Designate areas for quarantine of workers who report being a close contact of a diagnosed case of COVID-19.
 - > Stop workers travelling to local communities during their time off.

Hygiene

Environmental cleaning

The amount of time COVID-19 survives on objects and surfaces will vary. Environmental cleaning is one way to remove COVID-19 particles.

Usual cleaning schedules will need to be increased.

- > Frequently touched surfaces, including handrails and doors, should be cleaned regularly using appropriate detergent solutions. Once cleaned, they should ideally be disinfected regularly using appropriate disinfectant solutions.
- > Personal items used in the workplace such as glasses and phones should be cleansed and ideally disinfected frequently (e.g. by using isopropyl alcohol wipes).
- > Workplace amenities including kitchens, lunch rooms, communal areas, change rooms, toilets, showers, drink fountains and vending machines, should be cleaned industrially and the frequency of this cleaning should increase.

Also consider reducing the number of touch points for workers. For example, leaving access doors open, where appropriate.

Workers should be provided with cleaning agents and trained to clean down and disinfect plant or equipment (e.g. farm machinery or tools) immediately after use. Workers should each be provided with their own equipment if possible.

To minimise the risk of exposure to the COVID-19 virus the person cleaning should wear gloves and wash their hands or use alcohol-based hand sanitiser before and after wearing gloves. Gloves and alcohol-based hand sanitiser should be made available..

The workplace should provide closed bins for workers to hygienically dispose of waste and rubbish such as used tissues, immediately (or if away from amenities, as soon as possible) after use. Hand washing facilities or alcohol-based hand sanitiser should be available for workers to use after they dispose of their waste.

If the increased availability of hand sanitiser introduces new health and safety risks (e.g. accidental ingestion by children), you need to manage those risks too.

You must monitor workplace conditions, including facilities, to ensure the measures in place to eliminate or manage the risks arising from COVID-19 are efficient and effective.

See Safe Work Australia's [Cleaning to prevent the spread of COVID-19 fact sheet](#) or the Department of Health information sheet on [Environmental cleaning and disinfection-principles for COVID-19](#) for further information.

Worker hygiene

Workers must practice [good hygiene](#). Workers must wash their hands with soap and water for at least 20 seconds. Hand washing should be done before and after eating and after going to the toilet. Other hygiene measures should include:

- > covering coughs and sneezes with an elbow or a tissue
- > disposing of tissues properly
- > using alcohol-based hand sanitisers with at least 60% ethanol or 70% isopropanol as the active ingredient
- > cleaning and disinfecting surfaces
- > washing body, hair (including facial hair) and clothes thoroughly every day
- > staying more than 1.5 metres away from others, and
- > reporting and staying home if experiencing any symptoms.

In addition, to prevent the spread of COVID-19, workers should also:

- > avoid touching their face
- > avoid handshakes or any other close physical contact
- > refrain from spitting at all times, and
- > put cigarette butts in the bin.

To enhance worker hygiene standards, you should also:

- > adequately delineate between work and common areas. This could include reminding workers (with [posters](#) or through training) to wash their hands with soap and water for at least 20 seconds, or sanitise their hands with alcohol-based hand sanitiser, before entering and exiting a common area.
- > inform workers of workplace etiquette and standards that are expected when utilising these common areas (cleaning up after yourself, placing rubbish in bins provided, avoiding putting items such as phones on meal surfaces etc).

Adequate and accessible facilities

You must ensure there are adequate and accessible facilities to support the implementation of measures to achieve physical distancing and [good hygiene](#).

Washroom facilities must be properly stocked and have adequate supplies of soap, water and toilet paper. Washroom facilities must be kept clean and in good working order. Workplaces should also be well stocked with alcohol-based hand sanitiser, where available.

Consider whether there are an adequate number of hand washing stations to sustain the increase in workers practicing good hygiene.

If creating a new eating or common area to enable physically distancing, you must ensure these areas are adequately equipped (e.g drinking water, rubbish bins), and protected from the elements, contaminants and hazards.

You must ensure all facilities are in good working order and are clean and safe.

For further information on providing adequate and accessible facilities, including providing facilities for a temporary, mobile or remote workplace see the [Model Code of Practice: Managing the work environment and facilities](#).

Deliveries and other contractors attending the workplace

Non-essential visits to the workplace should be cancelled or postponed.

Deliveries and other contractors who need to attend the workplace should be given clear instructions of your requirements while they are on site.

Minimise the number of workers attending to deliveries and contractors as much as possible. Make alcohol-based hand sanitiser available for workers after physically handling deliveries.

Direct visiting truck drivers to remain in vehicles and use contactless methods such as mobile phones to communicate with your workers wherever possible.

Use, and ask deliveries and contractors to use, electronic paper work where possible, to minimise physical interaction. Where possible, set up alternatives to requiring signatures. For instance, see whether a confirmation email or a photo of the loaded or unloaded goods can be accepted as proof of delivery or collection (as applicable).

Keep workers informed

You must provide all workers information about the risks of exposure to the COVID-19 virus. Where required, workers should be trained in infection control.

The Australian Government Department of Health has a range [of posters and other resources](#) aimed at educating the public about COVID-19.

Consultation and communicating with workers

You must consult with your workers on health and safety matters relating to COVID-19. This means you must consult when:

- assessing the risk COVID-19 presents to the health and safety of workers
- deciding on the control measures to put in place to eliminate or minimise the risk of exposure to COVID-19

- deciding on the adequacy of facilities for the welfare of workers (e.g. hand washing facilities), and
- proposing other changes to the workplace as a result of COVID-19 which may affect health and safety.

If you and the workers have agreed to procedures for consultation, the consultation must be in accordance with those procedures.

You must allow workers to express their views and raise work health and safety issues that may arise directly or indirectly because of COVID-19. You must take the views of workers into account when making decisions and advise workers of your decision. Workers are most likely to know about the risks of their work. Involving them will help build commitment to this process and any changes.

Consultation does not require consensus or agreement but you must allow your workers to be part of the decision making process for COVID-19 related matters.

If workers are represented by Health and Safety Representatives (HSRs) you must include them in the consultation process.

The [model Code of Practice: Work health and safety consultation, cooperation and coordination](#) can provide more information about your duties to consult.

You need to communicate clearly with workers about control measures. Provide clear direction and guidance about what is expected of workers.

Workers must know:

- > when to stay away from the workplace
- > what action to take if they become unwell
- > what symptoms to be concerned about.

Remind workers they have a duty to take reasonable care for their own health and safety and to not adversely affect the health and safety of others.

Provide workers with a point of contact to discuss their concerns, and access to support services, including employee assistance programs. A list of support services to help workers is provided below.

Interstate workers

Some states and territories have largely closed their borders, requiring people arriving from interstate to self-quarantine for at least 14 days. However, there are some exemptions, including services that support agriculture.

You should stay up to date on the latest travel restrictions and requirements from the Commonwealth, state and territory governments and provide that information to your workers.

How can I meet my officer duty during the COVID-19 outbreak?

- > Keep your knowledge of the COVID-19 situation up-to-date. Follow advice from authoritative sources such as the Australian Government Department of Health and check daily for any updates to safety advice.
- > Ensure you understand your business and its WHS hazards and risks. Risk assessments are a useful tool to help identify WHS hazards and risks, as well as strategies to help manage them. Where you have risk assessments in place, they may need to be reviewed to ensure they are up to date. It may not be possible because of the work you do to facilitate all workers to work from home, but there are many steps you can take to minimise the risks in an office environment.
- > Make sure your premises are properly resourced to manage WHS risks during the COVID-19 outbreak, and check that the resources are being used.
- > Review your policies, procedures and reporting process to ensure they remain current for any incidents, hazards and other WHS issues that arise during this time. Update these materials if necessary.
- > Ensure all that these are communicated clearly and processes are being followed.
- > Consult with workers and ensure there is a means for them to raise any concerns about the steps you are taking to manage the risks.

*Please note. To ensure this webpage is accessible and easy to understand, it talks about employer responsibilities. Under the model WHS laws, duties apply to a broader range of people than just employers. Any person conducting a business or undertaking (PCBU) is covered by the model WHS laws. For more information see the [Interpretive Guideline – model Work Health and Safety Act – the meaning of 'person conducting a business or undertaking'](#).
